

# Cut the sticks

You are given  $N$  sticks, where the *length* of each stick is a positive integer. A *cut operation* is performed on the sticks such that all of them are reduced by the length of the smallest stick.

Suppose we have six sticks of the following lengths:

```
5 4 4 2 2 8
```

Then, in one *cut operation* we make a cut of length 2 from each of the six sticks. For the next *cut operation* four sticks are left (of non-zero length), whose lengths are the following:

```
3 2 2 6
```

The above step is repeated until no sticks are left.

Given the length of  $N$  sticks, print the number of sticks that are left before each subsequent *cut operations*.

*Note:* For each *cut operation*, you have to recalculate the length of smallest sticks (excluding zero-length sticks).

## Input Format

The first line contains a single integer  $N$ .

The next line contains  $N$  integers:  $a_0, a_1, \dots, a_{N-1}$  separated by space, where  $a_i$  represents the length of the  $i^{th}$  stick.

## Output Format

For each operation, print the number of sticks that are cut, on separate lines.

## Constraints

- $1 \leq N \leq 1000$
- $1 \leq a_i \leq 1000$

## Sample Input 0

```
6
5 4 4 2 2 8
```

## Sample Output 0

```
6
4
2
1
```

## Sample Input 1

```
8
1 2 3 4 3 3 2 1
```

## Sample Output 1

```
8
6
```

4
1

Explanation

Sample Case 0 :

sticks-length	length-of-cut	sticks-cut
5 4 4 2 2 8	2	6
3 2 2 __ 6	2	4
1 ____ 4	1	2
_____ 3	3	1
_____	DONE	DONE

Sample Case 1

sticks-length	length-of-cut	sticks-cut
1 2 3 4 3 3 2 1	1	8
_ 1 2 3 2 2 1 _	1	6
-- 1 2 1 1 --	1	4
___ 1 _____	1	1
_____	DONE	DONE
